Configuration

Configuring OpenDNSSEC has a number of aspects:

Configuration Files

These can be customised for each installation, although the default configuration installs good default values. The individual files and tools to check the configuration files are described here.

Keys

Configure your HSM as required.

Zones

Check the supported zone formats.

External Auditing of Zones

The auditor component of OpenDNSSEC was removed in 1.4. The Zone Auditing page describes alternative validation tools and configurations.

Migration

If you are migrating to OpenDNSSEC read our Migration guide.
