

Configuration

Configuring OpenDNSSEC has a number of aspects:

Configuration Files

These can be customised for each installation, although the default configuration installs good default values. The individual files and tools to check the configuration files are described [here](#).

Keys

Configure your [HSM](#) as required.

Zones

Check the supported [zone formats](#).

External Auditing of Zones

The auditor component of OpenDNSSEC was removed in 1.4. The [Zone Auditing](#) page describes alternative validation tools and configurations.

Migration

If you are migrating to OpenDNSSEC read our [Migration guide](#).
